Hiring Team

AltaML / Brilliant Harvest

Dear Hiring Team,

I am applying for the Associate Data Operations Specialist (Brilliant Harvest) 8-month internship. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in the role because it connects clean data operations, documentation, workflow improvement, and agricultural technology.

My current remote internship with HMD Agro gives me relevant context for farm-management workflows: I am integrating an existing platform by building an API-backed AI module and reporting interface for crop and dairy operations, while coordinating requirements, data collection, and configuration with my supervisor and the PDG. That experience maps well to Brilliant Harvest's need to turn real-world manuals, documents, and raw data into organized, usable information.

I also bring hands-on software and data foundations from my projects. In Mafhoum, I designed 50+ REST API endpoints and worked with PostgreSQL, Prisma, Redis, Docker, and product scoping. In my Multi-Agent AI Orchestrator and VoiceBubble projects, I used Python, JSONL history, LLM tooling, Whisper, and structured local data to make AI-assisted workflows more reliable. At Retraite Quebec, I maintain accurate, sensitive records in a regulated environment, which has strengthened my attention to data quality, timelines, and communication with cross-functional teams.

I would be glad to contribute careful data organization, documentation, and automation-minded support to Brilliant Harvest's product work. Thank you for your time and consideration.

Sincerely,

Mohamed Slim
