Hiring Team
AMD

Dear Hiring Team,

I am applying for the Short Term 2026 Machine Learning/Artificial Intelligence Intern/Co-Op role in Markham. I am a Computer Science student at Laval University, authorized to work in Canada, and interested in AMD's AI ecosystem because the internship connects machine learning, AI performance, product-facing software, and research-and-development work on current and future products.

My strongest match is hands-on AI software experimentation with solid software engineering fundamentals. I built a Python-based Multi-Agent AI Orchestrator using Claude Agent SDK, Discord.py, JSONL conversation history, persistent memory, and scheduled agent workflows. I also built VoiceBubble, a macOS dictation app that combines local MLX Whisper transcription, Claude-based refinement, PyQt6, and SQLite. These projects gave me practical experience turning AI models into usable tools, debugging model/application behaviour, and iterating on user experience.

I also bring a full-stack and data-backed engineering foundation. In Mafhoum, a production-bound learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments; implemented real-time interactions with Socket.IO; modeled data with Prisma and PostgreSQL; and used Dockerized local environments. That background maps well to AMD's need for interns who can learn quickly, work with Python/C++ concepts, reason about algorithms and data, and support AI software teams with implementation and documentation.

I understand the posting lists machine learning, data science, computer vision, Python, C/C++, SQL/NoSQL databases, and deep-learning frameworks as areas of interest. I am not claiming prior AMD product or deep-learning framework production experience, but I can bring verified Python, C++, SQL, machine-learning coursework, scikit-learn/Pandas/Jupyter exposure, LLM experimentation, and a strong willingness to learn in a hybrid or onsite 37.5-hour/week co-op environment.

Sincerely,
Mohamed Slim
