Hiring Team
Astera Labs

Dear Hiring Team,

I am applying for the Platform Applications Engineer Intern (8-month Co-Op) role in Vancouver. I am a Computer Science student at Laval University, authorized to work in Canada, and interested in Astera Labs because the role sits at the practical intersection of software tooling, system troubleshooting, customer-facing product integration, and AI/datacenter infrastructure.

My strongest fit is building software that makes complex systems easier to use, inspect, and improve. In Mafhoum, a production-bound community learning platform I co-founded, I designed 50+ REST API endpoints, modeled data with Prisma and PostgreSQL, implemented Socket.IO real-time behaviour, and used Dockerized local environments. That work developed the same bias toward reliable tooling, clear interfaces, debugging discipline, and cross-functional feedback loops that a platform applications role requires.

I also bring Python/C++ fundamentals and automation experience. My Multi-Agent AI Orchestrator uses Python, Claude Agent SDK, Discord.py, scheduled workflows, JSONL traces, and persistent memory, while VoiceBubble combines local Whisper transcription, Claude-based refinement, PyQt6, and SQLite. These projects strengthened how I build reproducible workflows, inspect logs, isolate failures, and turn ambiguous requirements into working tools.

I understand this internship values software development in C/C++/C# and/or Python, customer-first communication, hands-on troubleshooting, and comfort learning firmware, hardware, and datacenter-platform concepts. I can bring verified Python, C++, JavaScript, SQL, Docker, REST API, Git, and product-shipping experience, plus a strong willingness to learn Astera Labs' connectivity platforms, lab workflows, and customer integration process during the 8-month co-op.

Sincerely,
Mohamed Slim
