Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am writing to apply for CIBC's Application/Software Developer Co-op role in Toronto. I am authorized to work in Canada, based in Quebec City, and available immediately. CIBC's general software co-op posting is a strong match for the application development work I want to keep building in a product-oriented team.

My experience is centered on building practical software across the API layer and the user interface. At Mafhoum, I co-founded and helped architect a full-stack community learning platform, designed 50+ REST API endpoints, and implemented React, Express.js, PostgreSQL, Redis, Socket.IO, Prisma, JWT rotation, OAuth login flows, and Dockerized local environments. That work strengthened my ability to build maintainable application features, work across frontend and backend layers, and keep delivery focused on reliable user-facing software.

I have also shipped client-facing web work in an internship setting. At CHC Navigation, I built a responsive product showcase website in HTML, CSS, and JavaScript that reached production deployment and client approval. In my current role, I also handle sensitive, high-volume administrative data in a regulated environment, which has reinforced my attention to accuracy, process, and steady execution.

I would welcome the opportunity to contribute to CIBC with clean implementation, clear communication, and dependable delivery. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
