Cohere Hiring Team
Cohere

Dear Hiring Team,

I am writing to apply for Cohere's Machine Learning Intern/Co-op position for Fall 2026. I am a B.Sc. Computer Science student at Laval University in Quebec City, authorized to work in Canada, and I am excited by the chance to contribute to Cohere's remote-friendly machine learning work while continuing to build practical systems that ship.

My strongest AI experience comes from two projects. In my Multi-Agent AI Orchestrator, I built a Discord-based system in Python with the Claude Agent SDK, JSONL conversation history, and persistent memory to route messages to specialized agents and preserve context across sessions. In VoiceBubble, I combined local MLX Whisper transcription with Claude-based refinement and per-app context profiles to turn raw dictation into polished text on macOS. Those projects taught me how to work with LLMs, transcription pipelines, and iterative experimentation while keeping the software usable.

I also bring experience shipping real products in team settings. At CHC Navigation, I built a client-approved responsive website for GNSS/GPS and topography equipment. At Retraite Quebec, I maintain data accuracy, handle sensitive files, and coordinate with cross-functional teams in a regulated environment where precision matters. I would welcome the opportunity to bring that same discipline to Cohere.

Thank you for your time and consideration. I would be glad to discuss how my background in Python, LLM tooling, and product-focused development could support your team.

Sincerely,

Mohamed Slim
