Cohere Hiring Team
Toronto, Ontario, Canada

Re: Cohere Research Internship (Fall, 2026)

Dear Hiring Team,

I am a Computer Science student at Laval University in Quebec City, and I am excited to apply for Cohere's Research Internship (Fall, 2026) in Toronto. I am authorized to work in Canada and available immediately.

My strongest preparation for this role is the way I have combined Python, LLM tooling, and practical experimentation in my projects. In my Multi-Agent AI Orchestrator, I built a Discord-based system that routes messages to 10 specialized Claude agents and preserves context with JSONL history and persistent memory. In VoiceBubble, I built a macOS dictation app that combines local MLX Whisper transcription with Claude-based refinement, which strengthened my interest in building and evaluating language-model workflows.

I also bring solid software engineering fundamentals from full-stack work. At Mafhoum, I co-founded and architected a platform with 50+ REST API endpoints, real-time Socket.IO features, JWT rotation, OAuth login flows, Prisma schema modeling, and Dockerized development environments. Those experiences taught me how to move quickly while keeping systems organized and maintainable.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Cohere's research team and learn from the work being done on applied AI systems.

Sincerely,
Mohamed Slim
