Hiring Team
Cresta
Toronto, Canada

Dear Cresta Hiring Team,

I am writing to apply for the Forward Deployed Engineering Intern (AI Agent) role in Toronto. I am a Computer Science student at Laval University, authorized to work in Canada, and available immediately. Your focus on customer deployments and AI agents strongly matches the kind of software work I want to do.

I have built full-stack systems with React, Node.js, PostgreSQL, Socket.IO, Docker, and REST APIs, and I enjoy turning ambiguous requirements into working products. On Mafhoum, I helped architect a community learning platform and designed 50+ API endpoints across auth, communities, courses, gamification, and payments. In a separate multi-agent project, I built a Discord-based orchestration system that routes messages to specialized Claude agents and uses cron jobs for standups, progress checks, reviews, and handoffs.

I also bring experience shipping client-facing work. During my web developer internship at CHC Navigation, I delivered a product showcase website that reached production and secured client approval. In my current administrative role at Retraite Quebec, I work with sensitive files in a high-volume, regulated environment, which has reinforced the importance of accuracy, communication, and follow-through.

I would welcome the opportunity to contribute that same shipping mindset to Cresta's AI agent team. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
