Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am excited to apply for Cresta's Software Engineer Intern role in Toronto. The combination of software infrastructure and AI-adjacent product work is especially compelling to me, and I would welcome the chance to contribute in a hybrid Toronto environment.

My recent projects center on shipping practical software systems. I co-founded Mafhoum, a production-bound full-stack platform where I helped design 50+ REST API endpoints, real-time Socket.IO features, and Dockerized development workflows. I also built a Discord-based multi-agent orchestration system in Python with the Claude Agent SDK, plus VoiceBubble, a macOS dictation app that combines local MLX Whisper transcription with Claude-based refinement. These projects strengthened my habits around APIs, system design, and building reliable features end to end.

In addition to my technical projects, I shipped client-approved web work during a 2023 internship and currently work in a regulated government environment, where accuracy and accountability matter every day. I am authorized to work in Canada and available immediately.

Thank you for your time and consideration. I would be glad to bring my software engineering experience, AI tooling background, and product-minded approach to Cresta.

Sincerely,
Mohamed Slim
