Hiring Team
Hatch
Mississauga, ON

Dear Hiring Team,

I am applying for the Jr. Software Developer Co-op Student role at Hatch. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in the role because it combines Agile software delivery, global collaboration, and practical systems that support engineering, energy, infrastructure, and business teams.

My strongest fit is full-stack and API-backed product work. On Mafhoum, I co-founded and architected a production-bound learning platform, designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and helped prioritize a roadmap with a small team. I also built real-time features with Socket.IO, JWT/OAuth authentication flows, Prisma data modeling, and Dockerized local environments.

I would bring the same disciplined approach to Hatch's software teams: breaking work into clear user stories, writing and reviewing code with source control, testing against acceptance criteria, and documenting implementation choices. My UTask project also maps well to the role's web and REST focus: I implemented CRUD task boards with drag-and-drop and real-time sync against a Swagger/OpenAPI backend.

Thank you for your time and consideration. I would be glad to discuss how my JavaScript, SQL, REST API, Agile, and full-stack project experience can support Hatch's September 2026 co-op team in Mississauga.

Sincerely,
Mohamed Slim
