May 26, 2026

Dear Hiring Manager,

I am a Computer Science student at Laval University in Quebec City and I am writing to apply for Geotab's Software Developer Intern, Giga (Fall/September 2026, 12 Months) role. The posting's focus on backend services, APIs, frontend features, and Agile collaboration matches the kind of software work I have been building toward.

At Mafhoum, I co-founded and helped architect a production-bound community learning platform using React, Express.js, PostgreSQL, Redis, Socket.IO, Prisma, and Docker. I designed more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments, and I enjoy turning product requirements into reliable implementation details.

I also bring internship experience from CHC Navigation, where I shipped a client-approved product showcase website, and from my current work at Retraite Quebec, where accuracy, coordination, and deadline discipline matter every day. Those experiences strengthened my debugging habits, my communication with stakeholders, and my ability to ship user-facing work carefully.

I am authorized to work in Canada and would welcome the opportunity to contribute to Geotab's MyGeotab Reporting and Authentication team by helping design, test, and maintain software that directly affects customers. Thank you for your time and consideration.

Sincerely,

Mohamed Slim
