Hiring Team
GoMaterials
Montreal, QC

Dear Hiring Team,

I am applying for the Data Quality Intern – Fall 2026 role at GoMaterials. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in the role because it combines careful supplier data work with a fast-moving Montreal startup that uses data to improve how landscape contractors source materials.

At Retraite Quebec, I maintain data accuracy and regulatory compliance for RRQ pension mandates in a high-volume environment, process sensitive client files, and resolve discrepancies with cross-functional teams. That experience maps directly to GoMaterials' need for someone who can review inventory uploads, catch missing or inconsistent information, and keep internal records aligned with standards.

I also bring a technical foundation in SQL, PostgreSQL, Python, Pandas, and database-backed software projects. On Mafhoum, I helped model PostgreSQL data with Prisma and built REST API workflows across authentication, communities, courses, and payments. I would use that same attention to structure and consistency to support supplier inventory standardization, data imports, and collaboration with Supplier and Operations teams.

Thank you for your time and consideration. I would be glad to discuss how my data accuracy experience, database background, and startup-oriented project work can support GoMaterials' 2026 plans.

Sincerely,
Mohamed Slim
