Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am excited to apply for GPTZero's Machine Learning Intern role in Toronto. The role fits the kind of applied ML work I want to do: building useful systems, testing ideas quickly, and shipping products that people can rely on.

My recent work is centered on applied AI and software delivery. I built VoiceBubble, a macOS dictation app that combines local MLX Whisper transcription with Claude-based refinement, and a Discord-based multi-agent orchestration system in Python using the Claude Agent SDK and persistent JSONL memory. I also co-founded Mafhoum, where I helped architect a production-bound full-stack platform with 50+ REST API endpoints, real-time features, and Dockerized development environments.

In my current internship, I am integrating an API-backed AI module into a farm-management tool, and in a prior internship I shipped a client-approved web product in a production setting. I am authorized to work in Canada, available immediately, and open to internships anywhere in Canada.

Thank you for your time and consideration. I would welcome the opportunity to contribute to GPTZero and learn from a team working on machine learning in practice.

Sincerely,
Mohamed Slim
