Dear Hiring Team,

I am a Computer Science student at Laval University and I am writing to apply for the Intern Developer role with Affinity Decision Support (ADS) / Harris Computer in Remote - Ontario. The posting's emphasis on software development process, design, development, testing, collaboration with cross-functional teams, and documenting work for QA matches the kind of work I want to keep building on.

At Mafhoum, I co-founded and architected a production-bound full-stack platform and designed more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments. That work taught me how to translate requirements into reliable features, keep interfaces consistent, and think about quality early in the build process.

I have also built a Multi-Agent AI Orchestrator in Python and the Claude Agent SDK, with cron jobs that trigger specialized agents for standups, progress checks, reviews, and handoffs. In parallel, my UTask project implemented CRUD boards with drag-and-drop and real-time sync against a Swagger/OpenAPI backend, and my CHC Navigation internship shipped a client-approved website in HTML, CSS, and JavaScript. Together, these experiences strengthened my habit of shipping carefully, documenting clearly, and working across the stack.

Outside of projects, I work as an Administrative Technician at Retraite Québec, where I handle sensitive files, maintain data accuracy, coordinate with cross-functional teams, and work under tight deadlines in a regulated environment. I am authorized to work in Canada and available immediately.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Harris Computer and ADS.

Sincerely,
Mohamed Slim
