July 20, 2026

Dear Hiring Team,

I am a Computer Science student at Laval University and I am excited to apply for Hitachi Rail's Data and Business Intelligence Analyst Intern role for Fall 2026 in Toronto/Scarborough. I am authorized to work in Canada and open to internships anywhere in Canada. The role's mix of BI report development, data modeling, Python/SQL work, data transparency, documentation, and AI-assisted automation is a strong fit for my technical background and my interest in reliable systems that support operational decisions.

In my current HMD Agro internship, I am integrating an existing farm-management platform by building an API-backed AI module and reporting interface for crop and dairy workflows. I coordinate requirements with the supervisor and PDG, turn the work into milestones, and align data collection and configuration so the software can be useful in an operational setting. That experience maps well to Hitachi Rail's emphasis on translating stakeholder needs into reports, documenting data-processing steps, testing outputs, and improving data quality.

I also bring hands-on software and data-backed application experience from projects. I co-founded Mafhoum, a full-stack platform where I designed more than 50 REST API endpoints, modeled data with PostgreSQL and Prisma, implemented authentication and real-time features, and Dockerized the development environment. My projects also include a Python-based multi-agent orchestration system and a Vue.js task-board application built against a Swagger/OpenAPI backend. While I do not want to overstate direct Power BI or DAX experience, I have a strong Python, SQL, database, API, and data-quality foundation and would be ready to learn Hitachi Rail's BI toolkit quickly.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Hitachi Rail Canada as an intern who communicates clearly, learns quickly, and supports business intelligence, AI-enabled workflow ideas, and transparent reporting for engineering operations.

Sincerely,
Mohamed Slim
