Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am writing to apply for the Data and Business Intelligence Analyst, Intern role at Hitachi Rail. The posting's focus on reporting, data modeling, transparent logic for stakeholders, and AI-enabled operational improvements fits well with my background in Python, SQL, data handling, and building practical software that supports decision-making.

Most recently, I have been working on projects that combine data, automation, and product delivery. At HMD Agro SA, I helped integrate an API-backed AI module and reporting interface for crop and dairy workflows. In my projects, I co-founded Mafhoum and designed 50+ REST API endpoints across core product areas, and I built a Python multi-agent orchestrator and VoiceBubble, a dictation app that uses local Whisper transcription and automated refinement. These experiences strengthened my data processing, scripting, documentation, and testing habits.

I also work as an Administrative Technician at Retraite Québec, where accuracy and compliance matter every day in a high-volume environment. I am authorized to work in Canada and available immediately. Thank you for your time and consideration; I would welcome the opportunity to contribute to Hitachi Rail's BI team and learn from a role centered on reporting, data modeling, and continuous improvement.

Sincerely,
Mohamed Slim
