Hiring Team
IBM Canada

Dear Hiring Team,

I am applying for the AI & Automation Business Analyst Intern role for September 2026. I am a Computer Science student at Laval University, authorized to work in Canada without sponsorship, and I am interested in IBM's work connecting AI, automation, analytics, and practical decision support. The posting's focus on data concepts, AI/GenAI familiarity, automation, and business analysis aligns with the way I have been building technical tools around real workflows.

My strongest fit is bridging technical implementation with clear product and stakeholder context. In my current HMD Agro internship, I am integrating an existing farm-management platform by building an API-backed AI module and reporting interface for crop and dairy workflows, while coordinating scope, data collection, and milestones with the supervisor and PDG. In Mafhoum, a production-bound community learning platform I co-founded, I helped translate product needs into a roadmap while designing 50+ REST API endpoints across authentication, communities, courses, gamification, and payments.

I also bring hands-on AI and data-backed software experience. I built a Discord-based multi-agent orchestration system in Python using Claude Agent SDK, JSONL conversation history, isolated prompts, and persistent markdown memory. I also built VoiceBubble, a macOS dictation app combining local MLX Whisper transcription, Claude-based refinement, PyQt6, and SQLite. These projects gave me practical experience evaluating user needs, shaping AI workflows, and turning model outputs into usable systems that can be tested and improved.

IBM stands out because this internship combines analysis, automation, AI concepts, and collaborative problem solving in Canada. I would be excited to contribute my Python, LLM tooling, data-backed application development, and product-building experience while learning from IBM's AI & Automation team.

Sincerely,
Mohamed Slim
