Hiring Team
IBM Canada

Dear Hiring Team,

I am applying for the Machine Learning Developer Intern role for September 2026. I am a Computer Science student at Laval University, authorized to work in Canada without sponsorship, and I am interested in IBM's work at the intersection of machine learning, generative AI, data analysis, and production software. The internship's focus on Python, machine learning concepts, statistical analysis, and LLM/GenAI tools aligns closely with the projects I have been building.

My strongest fit is hands-on AI and software engineering. I built a Discord-based multi-agent AI orchestration system in Python using Claude Agent SDK, Discord.py, JSONL conversation history, isolated prompts, and persistent markdown memory so specialized agents could retain role-specific context across sessions. I also built VoiceBubble, a macOS push-to-talk dictation app combining local MLX Whisper transcription, Claude-based refinement, PyQt6, and SQLite. These projects gave me practical experience integrating AI models into usable workflows rather than treating them as standalone demos.

I also bring full-stack and data-backed engineering experience from Mafhoum, a production-bound learning platform I co-founded with React 19, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker. I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented real-time interactions and authentication flows. My coursework includes machine learning, databases, operating systems, data structures and algorithms, and software engineering, which gives me a strong base for contributing to IBM while continuing to grow in applied ML and data engineering.

IBM stands out because the posting connects ML development with real software delivery and collaborative client-focused problem solving. I would be excited to bring my Python, LLM tooling, data-backed application development, and product-building experience to the team in Canada.

Sincerely,
Mohamed Slim
