Hiring Team
Kensington Tours

Dear Hiring Team,

I am applying for the Product Intern role in Toronto. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in Kensington because the internship combines product information quality, research, workflow coordination, and careful behind-the-scenes execution for client-facing travel experiences.

My experience fits the role's need for accuracy, organization, and structured follow-through. At Retraite Quebec, I maintain data accuracy and compliance while processing sensitive client files in a high-volume government environment, coordinating with cross-functional teams to resolve discrepancies under deadlines. That work maps directly to Kensington's need to maintain consistent product information, track requests, and support reliable internal workflows.

I also bring product-building and research habits from technical projects. In Mafhoum, a production-bound community learning platform I co-founded, I helped scope features, prioritize a roadmap, design 50+ REST API endpoints, and structure product experiences across communities, courses, gamification, and payments. During my CHC Navigation internship, I built and deployed a product showcase website and organized technical content for GNSS/GPS and topography equipment so product specifications were easier to navigate.

I can bring Kensington a detail-oriented intern who is comfortable with research synthesis, structured summaries, data/content accuracy, and collaborative workflow queues. I would be glad to support the Product & Partnerships team with product setup, content maintenance, reporting, and communication while learning how Kensington delivers personalized travel products at scale.

Sincerely,
Mohamed Slim
