Kinaxis Hiring Team

Kinaxis

Canada

Dear Kinaxis Hiring Team,

I am applying for the Co-op/Intern Software Development - C++ role starting September 2026. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in this role because it combines C++-focused software engineering, testing, automation, and collaborative development on the Maestro platform.

My strongest match is practical software development across the lifecycle. On Mafhoum, a production-bound community learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented maintainable client-server features with React, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, OAuth/JWT flows, Git, and Docker. That experience maps well to your emphasis on well-crafted code, collaboration with developers and testers, and delivering customer value.

I also bring C++ fundamentals, data structures and algorithms coursework, and hands-on experience shipping software in real settings. During my CHC Navigation web developer internship, I designed and deployed a client-approved product showcase website. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform, which has strengthened how I turn requirements into working software and keep projects moving.

I would be excited to contribute to Kinaxis as an intern, learn from the team, and help build reliable, tested software for a platform used in complex global supply chains. Thank you for your consideration.

Sincerely,

Mohamed Slim
