Hiring Team
Magnet Forensics

Dear Hiring Team,

I am applying for the Software Developer Engineer in Test Co-op role for Fall 2026. I am a Computer Science student at Laval University, authorized to work in Canada, and interested in Magnet Forensics because your products combine cloud software, digital-investigation impact, reliability, and careful engineering for customers who depend on trustworthy evidence workflows.

My strongest fit is building and validating data-backed software systems. In Mafhoum, a production-bound community learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments; modeled data with Prisma and PostgreSQL; implemented Socket.IO real-time behaviour; and used Dockerized local environments. That work maps well to an SDET role that requires understanding APIs, system integration, cloud-product behaviour, and how developers and testers collaborate to improve product quality.

I also bring practical Python, automation, and debugging habits. My Multi-Agent AI Orchestrator uses Python, Claude Agent SDK, Discord.py, scheduled workflows, JSONL traces, and persistent memory, while VoiceBubble combines local MLX Whisper transcription, Claude-based refinement, PyQt6, and SQLite. These projects strengthened the way I design reproducible workflows, inspect logs, isolate failures, and improve tooling over iterations.

I understand this co-op emphasizes automated test suites, CI/CD pipeline support, cloud deployment validation, API/SDK/system-integration testing, and close work with development teams. I can bring verified Python, JavaScript, Java, SQL, REST API, Docker, Swagger/OpenAPI, TDD, and troubleshooting experience, plus a strong willingness to learn Magnet Forensics' cloud automation and test frameworks during the Fall 2026 co-op.

Sincerely,
Mohamed Slim
