Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am excited to apply for Marvell's Machine Learning Intern role in Toronto. I am authorized to work in Canada and available immediately.

My background combines Python, machine learning, and product-focused software work. In VoiceBubble, I built a macOS dictation app with local MLX Whisper transcription and Claude-based refinement. I also built a multi-agent orchestration system in Python with the Claude Agent SDK, persistent memory, and cron-driven workflows. These projects strengthened my ability to work with AI systems, data flows, and practical implementation details.

I also have experience shipping software beyond AI. At Mafhoum, I co-founded a full-stack community learning platform and designed 50+ REST API endpoints, real-time Socket.IO features, authentication flows, and Dockerized environments. During a 2023 internship, I delivered a client-approved website in HTML, CSS, and JavaScript. That mix of applied engineering and careful execution is what I would bring to Marvell.

Thank you for your time and consideration. I would welcome the opportunity to contribute to your team and learn from Marvell's machine learning work.

Sincerely,

Mohamed Slim
