Dear Hiring Team,

I am a Computer Science student at Laval University and I am writing to apply for Nokia's IT Network Software/AI Development Co-op/Intern role in Ottawa. The posting's emphasis on Python, SQL, Databricks, and AI/LLM tooling aligns well with the software and automation work I have been building through my projects and experience.

At Mafhoum, I co-founded and architected a production-bound full-stack platform and designed more than 50 REST API endpoints across authentication, communities, courses, gamification, and payments. I also built real-time features with Socket.IO, JWT rotation, OAuth login flows, Prisma schema modeling, and Dockerized environments that make the stack easier to ship and maintain.

I have also built a Multi-Agent AI Orchestrator in Python and the Claude Agent SDK, with cron jobs that trigger specialized agents for standups, progress checks, reviews, and handoffs. That project strengthened the kind of disciplined, workflow-oriented automation that fits an IT/software development team working with AI tools and operational systems.

In addition, my work as an Administrative Technician at Retraite Québec has reinforced my attention to detail, comfort with sensitive data, and ability to coordinate with cross-functional teams under deadline pressure. I am authorized to work in Canada and would welcome the opportunity to contribute on-site in Ottawa during the September to December 2026 term.

Thank you for your time and consideration.

Sincerely,
Mohamed Slim
