Hiring Team
QuadReal Property Group

Dear Hiring Team,

I am applying for the AI Software Engineering, Fall 2026 co-op/internship in Toronto. I am a Computer Science student at Laval University, authorized to work in Canada, and interested in QuadReal's AI & Digital Innovation team because the role combines product engineering, AI workflows, sprint delivery, testing, documentation, and ownership of a scoped prototype.

Your posting emphasizes writing code for AI product features, using AI coding assistants, building a prototype end-to-end, and keeping engineering hygiene through standups, reviews, tests, READMEs, and runbooks. My background maps well to that mix. I co-founded Mafhoum, a production-bound community learning platform, where I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented real-time features with Socket.IO, JWT/OAuth flows, PostgreSQL/Prisma modeling, Redis, and Dockerized local environments.

I also bring hands-on AI tooling experience. My Multi-Agent AI Orchestrator uses Python, Claude Agent SDK, Discord.py, JSONL history, persistent memory, and cron-triggered workflows to coordinate specialized agent roles for standups, progress checks, reviews, and handoffs. In VoiceBubble, I combined local MLX Whisper transcription with Claude-based refinement and per-app context profiles in a macOS push-to-talk app. These projects taught me to scope practical AI features, maintain context and documentation, and make prototypes usable rather than just impressive demos.

I would be glad to contribute as a curious, collaborative intern who can pick up tickets, read existing code, ship reviewed features, and own a focused AI prototype through design, build, demo, and documentation. QuadReal's enterprise AI product environment is especially appealing because it connects real users, governance, and measurable business workflows.

Sincerely,
Mohamed Slim
