Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am applying for RBC's Data Analyst Intern role in Toronto. I am drawn to the role because it aligns with the kind of work I enjoy most: turning structured data into reliable, practical outputs. I am authorized to work in Canada and available immediately.

My background combines Python, SQL, and careful data handling with experience in environments where accuracy matters. At Retraite Quebec, I maintain data accuracy and regulatory compliance for RRQ pension mandates in a high-volume, government-regulated setting. I have also built projects that required structured data thinking and clear reporting, including an API-backed farm-management integration and web applications built with React, Node.js, PostgreSQL, Socket.IO, and Docker.

I would welcome the opportunity to bring that mix of data discipline, problem solving, and technical execution to RBC. Thank you for your time and consideration.

Sincerely,

Mohamed Slim
