Remarcable Hiring Team
Remarcable, Inc.
Vancouver, BC

Dear Remarcable Hiring Team,

I am applying for the Full Stack Developer (Student Co-op) role in Vancouver. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in Remarcable because the role combines practical full-stack product work, REST APIs, SQL-backed development, Git-based collaboration, and a SaaS product that improves contractor and distributor workflows.

My strongest match is hands-on full-stack execution. On Mafhoum, a production-bound community learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented client-server features with React, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, OAuth/JWT flows, and Dockerized local environments. That experience maps closely to your focus on backend, frontend, APIs, data, clean documentation, and maintainable product features.

I also bring internship experience shipping client-facing web work. As a Web Developer Intern at CHC Navigation, I designed and deployed a responsive product showcase website with HTML, CSS, and JavaScript, organized technical product pages, and reached client approval. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform, which has strengthened how I turn requirements into scoped, working software.

I would be excited to bring that practical full-stack mindset to Remarcable's engineering team and contribute to production features while learning quickly from senior engineers. Thank you for your consideration.

Sincerely,
Mohamed Slim
