Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am applying for Scotiabank's Velocity – Data Scientist Internship/Co-Op – Fall 2026 role in Toronto. I am authorized to work in Canada and available immediately.

My background combines Python, SQL, Pandas, scikit-learn, machine learning coursework, and hands-on product building. I have built a multi-agent orchestration system in Python with the Claude Agent SDK, persistent memory, and automated workflows; a macOS dictation app with local MLX Whisper transcription and Claude-based refinement; and a full-stack platform with React, Node.js, PostgreSQL, Redis, Socket.IO, Prisma, and Docker. These experiences taught me how to structure data, ship reproducible systems, and move from analysis to implementation quickly.

Scotiabank's focus on cleaning, transforming, and visualizing large data sets, experimental design, statistical analysis, machine learning, Python, SQL, and Git workflows is a strong fit for the work I want to do. I also value the role's applied nature: preparing detailed documentation, presenting results to stakeholders, and using data-driven feedback to improve outcomes. My current work in a regulated environment at Retraite Quebec strengthened my attention to accuracy, reliability, and handling sensitive information.

I would welcome the opportunity to contribute to the Velocity team and continue growing as a data scientist while bringing a strong software foundation to the role.

Thank you for your time and consideration.

Sincerely,

Mohamed Slim
