Dear Hiring Manager,

I am a B.Sc. Computer Science student at Laval University, and I am applying for Sun Life's Student, Data Analytics / Data Science Intern (Fall 2026) role in Toronto or Waterloo. I am authorized to work in Canada and available immediately.

My background combines Python, SQL, Pandas, scikit-learn, and product-focused engineering. I have built a Discord-based multi-agent orchestration system in Python with the Claude Agent SDK, persistent JSONL memory, and scheduled automation; a full-stack community platform with React, Node.js, PostgreSQL, Redis, Socket.IO, Prisma, and Docker; and a macOS dictation app with local MLX Whisper transcription. These projects taught me how to work carefully with data, automate workflows, and ship practical software.

In my current role at Retraite Québec, I maintain data accuracy and handle sensitive client files in a regulated environment. I would bring that same attention to detail to Sun Life's analytics work, especially where data management, modeling, and reliable reporting matter.

Thank you for your consideration. I would welcome the opportunity to contribute this fall.

Sincerely,

Mohamed Slim
