Hiring Team
Super.com

Dear Hiring Team,

I am writing to apply for the Payments Engineering Intern role for the 12-month Fall 2026 term. I am a Computer Science student at Laval University, authorized to work in Canada, and based in Quebec City. Because Super.com is remote-first and candidates can be based anywhere in Canada with Eastern Time overlap, I can contribute remotely while meeting the role's Canada-based work requirement.

My project experience aligns with the role's focus on full-stack development, payment processing, fraud and risk technologies, and shipping production-ready code. On Mafhoum, a production-bound community learning platform, I co-founded and architected the application, designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented PostgreSQL-backed Prisma models, Redis caching, Socket.IO real-time interactions, JWT/OAuth flows, and Dockerized API environments.

Super.com's stack and responsibilities are especially relevant to my background: Python/FastAPI services, React frontends, Postgres/Redis storage, well-tested code, and collaboration with data, growth, marketing, and business stakeholders. I have also built UTask against a Swagger/OpenAPI backend with CRUD boards, drag-and-drop workflows, and real-time sync, and I am comfortable learning quickly across new tools while keeping features grounded in user and business impact.

I would be excited to help Super.com build reliable billing, checkout, tracking, and risk-management features while learning from a fast-moving engineering team. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
