Hiring Team
Tenstorrent

Dear Hiring Team,

I am applying for the AI Compiler Software Intern (PEY) role in Toronto. I am a Computer Science student at Laval University, authorized to work in Canada, and I am interested in Tenstorrent's work across AI models, compilers, systems software, and high-performance compute. The role's mix of C/C++, algorithms, Python, ML workloads, and performance analysis matches the direction I want to grow in while contributing practical software skills.

My strongest overlap is building AI-oriented and data-backed software. I built a Discord-based multi-agent AI orchestration system in Python using Claude Agent SDK, Discord.py, JSONL history, isolated prompts, and persistent memory so specialized agents could keep role-specific context across sessions. I also built VoiceBubble, a macOS push-to-talk app combining local MLX Whisper transcription, Claude-based text refinement, PyQt6, and SQLite. These projects gave me hands-on experience turning AI components into usable systems with attention to reliability and context handling.

I also bring full-stack engineering depth from Mafhoum, a production-bound learning platform I co-founded with React 19, Express.js, PostgreSQL, Redis, Prisma, Socket.IO, and Docker. I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments, and implemented real-time interactions and authentication flows. Alongside coursework in algorithms, operating systems, machine learning, databases, and software engineering, this gives me a strong base for learning compiler and runtime work in a mentored PEY environment.

Tenstorrent stands out because the internship is close to the full AI stack: ML graph compiler development, workload benchmarking, performance tooling, and collaboration across software, firmware, hardware, and systems teams. I would be excited to bring my Python, C++, algorithms, AI tooling, and product-building experience to the Toronto team while growing into performance-critical compiler engineering.

Sincerely,
Mohamed Slim
