Hiring Team
Tenstorrent

Dear Hiring Team,

I am applying for the Applied AI Intern, People Operations role in Toronto. I am a Computer Science student at Laval University, authorized to work in Canada, and interested in Tenstorrent because the internship connects AI, workflow automation, system design, and practical internal tooling for a team that is deliberately moving away from manual and fragmented processes.

My strongest match is building AI-assisted tools that turn ambiguous workflows into usable systems. I built a Python-based Multi-Agent AI Orchestrator using Claude Agent SDK, Discord.py, JSONL conversation history, persistent memory, and scheduled agent workflows. The project models Product Owner, Scrum Master, Developer, QA/Tester, and Stakeholder roles so repeated coordination work can be routed, tracked, and reused instead of handled manually. I also built VoiceBubble, a macOS dictation app combining local MLX Whisper transcription, Claude-based refinement, PyQt6, SQLite, and per-app context profiles.

I also bring full-stack and data-backed engineering experience that maps to Tenstorrent's need for automation across systems. In Mafhoum, a production-bound learning platform I co-founded, I designed 50+ REST API endpoints across authentication, communities, courses, gamification, and payments; implemented Socket.IO real-time features; modeled data with Prisma and PostgreSQL; and used Dockerized local environments. In my current HMD Agro internship, I am integrating an API-backed AI module and reporting interface into an existing farm-management platform, translating operational needs into milestones, data collection, configuration, and delivery checkpoints.

I understand this People Operations internship is not a predefined software role and requires structuring ambiguous problems, integrating tools through APIs or similar approaches, and building prototypes that reduce manual work. I am not claiming prior HR systems experience, but I can bring verified Python, JavaScript, SQL, API, workflow automation, LLM experimentation, and cross-functional coordination experience, along with a strong execution mindset for learning new systems quickly.

Sincerely,
Mohamed Slim
