Hiring Team
Tenstorrent

Dear Hiring Team,

I am writing to apply for the Release Engineer Intern role at Tenstorrent in Toronto. I am a B.Sc. Computer Science student at Laval University in Quebec City, authorized to work in Canada and available immediately. The role's focus on CI/CD, build systems, release automation, Python/C++, and Docker strongly matches the kind of software infrastructure work I want to do.

My background combines full-stack development, automation, and practical shipping experience. In Mafhoum, I co-founded and helped architect a production-bound platform, designed 50+ REST API endpoints, and implemented real-time features with Socket.IO, JWT rotation, OAuth, Prisma, and Docker. In my Multi-Agent AI Orchestrator project, I built a Python-based system with cron-driven workflows, persistent memory, and isolated agent roles, which strengthened my interest in reliable automation and repeatable processes.

I also brought products to production during my Web Developer internship at CHC Navigation, where I designed and shipped a responsive website that earned client approval. Across these experiences, I have learned how to turn requirements into dependable software and keep the result maintainable for other developers.

I would welcome the opportunity to contribute to Tenstorrent's release engineering work and keep learning in a fast-moving systems environment. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
