Hiring Team
Waabi

Dear Hiring Team,

I am writing to apply for the Research Internship/Co-op role on Waabi's Research team. I am a Computer Science student at Laval University, authorized to work in Canada, and based in Quebec City. Waabi's AI-first work on safe autonomous transportation is a strong match for my interest in building practical AI systems and reliable software.

My background combines Python, C++, machine learning coursework, and hands-on AI and software projects. I built VoiceBubble, a macOS dictation app that combines local MLX Whisper transcription with Claude-based refinement and per-app context profiles. I also built a Python multi-agent AI orchestrator using the Claude Agent SDK, Discord.py, JSONL history, persistent memory, and scheduled agent workflows. These projects gave me experience turning AI components into usable systems with repeatable behavior.

I also bring software engineering depth from Mafhoum, a production-bound community learning platform I co-founded and architected. I designed 50+ REST API endpoints, modeled PostgreSQL data with Prisma, implemented real-time Socket.IO interactions, JWT/OAuth authentication, Redis-backed infrastructure, and Dockerized local environments. That experience aligns with Waabi's need for interns who can design, implement, optimize, and collaborate with multidisciplinary research and engineering teams.

I would be excited to contribute to Waabi's research engineering work, learn from researchers and engineers working at the frontier of Physical AI, and help build systems that move autonomous driving technology closer to safe real-world deployment. Thank you for your time and consideration.

Sincerely,
Mohamed Slim
